50X1-HUM

2. The headquarters of the 108th Mountain Border Regiment [redacted] 50X1-HUM is at Ohrid. This unit (Commander: Lt. Col. Nobosovic, fnu) is a component of the 50th Division, which has its headquarters at Kicevo. The 50th Division is in turn a part of the XIXth Corps, with headquarters at Kumanovo (Commanding General: Major General Karanovic (fnu)). The 50th Division has units at the following locations:

Prespa: Communications center of the 108th Regiment.  
 Stip: Infantry battalion.  
 Prizren: Unknown unit.  
 Debar: Infantry regiment with three battalions.  
 Kicevo: Artillery regiment, two infantry battalions, one transportation battalion.

50X1-HUM

3. [redacted] The artillery battalion of the 108th Regiment is equipped with 105 mm. guns pulled by GMC prime movers. The 1st Battalion of the 108th consists of five companies; the first three are rifle companies, the fourth is a machine gun company, and the fifth is a support company. Commander of the 1st Battalion is Major Petro Kovacic; commander of the first company of the 1st Battalion is Captain First Class Voje Angelovski.
4. The military airfield at Zemun, near Belgrade, has 18 hangars and several splinter-proof shelters (Splitterboxen) in which about 100 jet aircraft are housed. About 1,000 Air Force troops are stationed at the field under the command of General Zdenko Ulepik.
5. In the Aleksandar Rankovic agricultural equipment factory at Zemun are several sections engaged in the manufacture of a bomb of Yugoslav invention. It weighs 18 kilograms, has three fins, and is 30 centimeters long. It is for use by aircraft on anti-personnel strafing missions. It has a contact fuse and splits into 86 fragments which in turn explode again. This gives the bomb a destructive radius of about 100 meters. The bomb went into mass production in the fall of 1958. Finished bombs are taken from Zemun to Kragujevac, where they are inspected before being placed in storage.
6. On a peninsula near the town of Mislina (see sketch) there is an underground supply depot of the Yugoslav Navy. The entrance to the depot can only be reached from the sea, where there is an unloading quay. There is no way of reaching the depot by road. It consists of four to six large storage shafts, each about 180 meters long, 60 meters wide, and five meters high. The tunnel leading to them from the entrance, which is traversed by a small railway, is six meters high. Stored in the depot are munitions, mines, and torpedoes. The approaches to the installation are guarded by patrol boats. One or two ships call every week or so with supplies.
7. The following is a sketch of the area in which the depot is located:

1. [redacted] Comment: Possibly Maj. Gen. Nikola Karanovic.
